

Today we present a mystery....

Time travel with me to the year 2006. Imagine yourself seated high up in the majestic hall of the United States Senate.

You are about to hear the presiding president of the Senate give permission for a senator to speak.

Listen to his impassioned speech about the then current crisis of the United States: That of again having to raise the federal debt limit.

Oh, the mystery?

Let's delay that discussion until you've hear this plea for fiscal responsibility.

<<Speech>>

Eloquent, exacting, and exceptionally encapsulated. The problem, the causes, the path to a solution.

This Senator from Illinois went onward in politics to the highest political office in the United States:

His name is Barack Obama

During his last 2 terms in office the U.S. debt has risen to over 16 Trillion dollars. This is double the amount of the debt spoken about in his speech, the increase occurring under his signature and advocacy for the increased budgets.

The mystery? There are several...

Why did he believe in 2006 as he did?

Why such a reversal of belief?

Is it possible that he was unaware of the real financial forces behind his political contributions?

These and many other questions are part of the mystery.

Maybe YOU have the answers.
